

CareRevolution

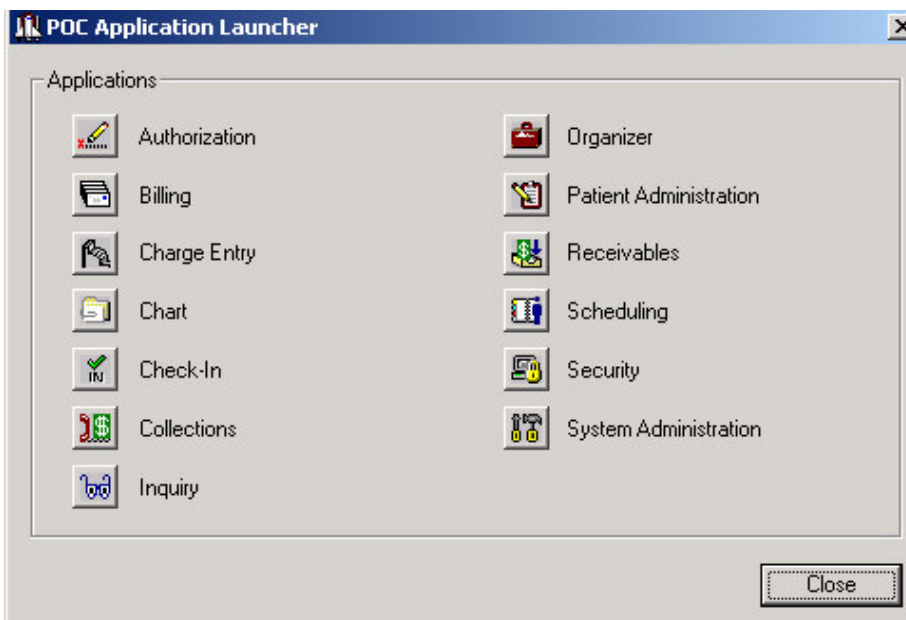

CareRevolution is actually the marriage of two products: PracticeRevolution practice management software and ChartRevolution Electronic Medical Records. These two strong software products link together to synergistically create something greater than its parts.

CareRevolution brings the functionality of these two products to the table along with a seamless integration. This means that demographics, appointments, messages, reminders and charges pass effortlessly between business and charting sides of the product.

The integration includes the System Administration meaning the overhead required for set up and management of the system is minimized.

Significant Elements

- ◆ Fully Integrated Practice Management and Electronic Medical Records
- ◆ Windows User Interface
- ◆ Robust Oracle Database
- ◆ Wireless Network Access
- ◆ Centralized Administration
- ◆ Organizer common to both business and clinical functions

All modules are easily accessed via the Application Launcher where both business and charting icons share a single window.

A Typical Electronic Medical Record

Chart for Marcus Castro - CareRevolution Today's Date: 06/26/2001

Current Allergies and Adverse Reactions:

Description
Bactrim
Aspirin

Charting begins with the physician's desktop. The provider is presented with all critical patient information in order to quickly review progress notes and interventions from previous visits. Once the exam is complete, prescriptions and orders are printed; follow-up visits are scheduled; and charges are passed to Checkout—all via a wireless tablet PC.
